

OZZ DRB1 P20''

88209 (black)

88215 (white)

Before installation

1. Before installation, check local laws and regulations, as well as those of any regions your vehicle may travel to, to ensure the LED light bar comply with all requirements.
2. Carefully read all installation instructions prior to beginning.
3. Verify that the dimensions and weight of the light bar and devices are suitable for your vehicle. See figure 01.
4. A small amount of internal moisture may occur but will be expelled through the vent after 2-4 operating cycles.
5. Operating Voltage: 10-32V DC.

Mounting

1. Drill 8.5 mm holes at the desired locations where the light will be mounted.
2. Secure the light using the bolt, add the locking washer, and tighten the bolt firmly.
3. Illustration of multiple mounting options: side brackets and bottom bracket available.
